

# Contents

<b>1 Introduction</b>	<b>2</b>
1.1 A Brief History of Trigonometry	2
1.2 Concept of Pi, Radian, and Degree	4
1.2.1 Mathematical Constant (Pi)	4
1.2.2 Computation of Pi	4
1.2.3 Angle Measurement in Circular System (Radian)	5
1.2.4 Angle Measurement in Sexagecimal System	6
1.2.5 Sine Quadrant as a Mathematical Tool	8
1.3 Trigonometric Functions	10
1.3.1 Notation of Function	10
1.3.2 Trigonometric Functions on the Unit Circle	11
1.3.3 Computation of Trigonometric Functions	14
1.3.4 Generation of Sine and Cosine Functions	15
1.4 Trigonometric Identities	17
1.4.1 Pythagorean Identities	18
1.4.2 Periodicity and Cofunction Identities	19
1.4.3 Angles Identities	21
1.4.4 Sum and Product Identities	25
1.5 Trigonometry Laws	26
1.5.1 Law of Sines	26
1.5.2 Law of Cosines	27
1.5.3 Law of Tangents	28
1.6 Series Definitions	28
1.6.1 Infinite Product	30
1.6.2 Euler's Identity	30
1.6.3 De Moivre's Identity	31
1.6.4 Elliptic Integrals	32
1.6.5 The Gamma and Beta Functions	33

1.6.6	Fourier Analysis	34
1.6.7	Sinc Function	37
1.6.8	Circular Variance	38
1.7	Exercises of Chapter 1	40
<b>2</b>	<b>Real World Applications of Sine and Cosine Functions</b>	<b>45</b>
2.1	Introduction	45
2.2	Sporting Events	45
2.2.1	Physical Activities	46
2.2.2	Olympic Games	46
2.2.3	Trampoline Gymnastics	50
2.3	Mechanical Engineering Applications	51
2.3.1	Power Generation	51
2.3.2	Function of an Engine Cycle	52
2.3.3	Thermal Analysis	54
2.4	Test Instruments	54
2.4.1	Sine-on-Random Test	55
2.4.2	Crashworthiness of Aircraft with Sine-Wave Beam	56
2.5	Civil Engineering Applications	57
2.5.1	Design of Highways and Railways	57
2.5.2	Bridge Construction and Buckling	58
2.5.3	Design of Wheel Chair Ramps	61
2.6	Wood and Metals Engineering Applications	61
2.6.1	Squaring Corner and Cutting Angles on Wood	63
2.6.2	Building Trusses for Roof Support	64
2.6.3	Sine-Shaped Corrugated Metal	65
2.6.4	Analysis of Tandem Cold Rolling Plant	66
2.7	Knife Beveling	67
2.7.1	Bevel Angle Calculation	67
2.7.2	Adjusting Grinding Angle	68
2.8	Calculation of Speed, Direction, Distance, Area, and Position	71
2.8.1	Speed and Direction of an Aircraft	71
2.8.2	Speed and Direction of a Balloon	72
2.8.3	Angle between Two Straight Lines	72
2.8.4	Bond Angle Calculation	73
2.8.5	Height of an Object	73
2.8.6	Altitude of a Drone	75
2.8.7	Distance Travelled within an Observation Period	76
2.8.8	Distance between Two Cities	77
2.8.9	Measuring Distance between the Earth and an X-Star	77

---

2.8.10	Taming “The Beast”	81
2.8.11	Area of the Bermuda Triangle	82
2.8.12	Position of a Celestial Object	84
2.9	Motion Modeling and Analysis	85
2.9.1	Modeling of Circular Motion	85
2.9.2	Motion of a Buoy	87
2.9.3	Discrete Sine Transform for Motion Analysis	87
2.9.4	Robotics Motion Analysis	88
2.10	Meteorology Applications	92
2.10.1	Estimation of Evaporation	92
2.10.2	Obtain Mean and Variance of Wind Direction	93
2.11	Acoustic Engineering Applications	93
2.11.1	Sound Navigation and Ranging	93
2.11.2	Acoustic Energy for Pest Control	94
2.11.3	Bats Navigation	96
2.11.4	Frightening Birds	97
2.11.5	Interference	98
2.11.6	Noise-Cancelling Headphones	98
2.12	The Sun Affected Activities	99
2.12.1	Sunrise and Sunset Relate to Sine Curves	99
2.12.2	Sunrise Equation	100
2.12.3	The Sun Motion Controls Shadow Length	101
2.12.4	House Heating by Sunlight	102
2.12.5	Modeling of Daily Temperature	102
2.12.6	Electromagnetic Radiation	104
2.12.7	Electromagnetic Spectrum	105
2.12.8	Extraterrestrial Radiation	107
2.13	Shallow Water Waves	108
2.13.1	Seiche and Tide	108
2.13.2	Tsunami and Swell	110
2.13.3	Capillarity	111
2.13.4	Modelling of Tidal Change	112
2.14	Medical Science Applications	113
2.14.1	Sensory Neurological Assessment in Humans	113
2.14.2	Fetal Heart Rate Monitoring	114
2.14.3	Chemotherapy Treatment	116
2.14.4	Kidney Stones Pulverizing	118
2.15	BCI Technology	120
2.15.1	What is BCI Technology?	120

2.15.2	Controlling Electrical Appliance just by Thinking in Mind	124
2.16	Digital Modulation	126
2.16.1	Modulation Techniques	127
2.16.2	Application of PAM	127
2.17	Business and Management Science Applications	128
2.17.1	Stock Market Analysis	128
2.17.2	Hilbert Sine Wave	129
2.17.3	Software Application of the Hilbert Sine Wave	130
2.17.4	Prediction of Economic Growth	131
2.17.5	Arcsine Laws for Mechanical Trading	132
2.18	Digital Image Processing Applications	133
2.18.1	Image Encryption using Sine Map	134
2.18.2	Image Encryption using Sine Curve	135
2.18.3	Image Watermarking	136
2.18.4	Standard Hough Transform	137
2.19	Chronobiological Factors	138
2.19.1	Theory of Biorhythms	138
2.19.2	Least Squares Sine Curve Analysis of Circadian Rhythms	139
2.20	Plasma Applications	141
2.20.1	Plasma Weapons for Computer Games	141
2.20.2	Suppression of Particle Generation in Plasma Processing	142
2.21	Biological Applications	142
2.21.1	Fractals in the Biological Science	142
2.21.2	Prevention of Deep Muscle Atrophy in Rat Calf Muscles	143
2.21.3	Auditory Threshold Estimation	144
2.21.4	Prediction of Liver Enzymes on Fish	144
2.22	Ballistic Trajectories	145
2.22.1	Space Vehicle Launching	146
2.22.2	Electromagnetic Railgun	148
2.23	Analysis of Dot and Cross Products	148
2.23.1	Dot and Cross Products	148
2.23.2	Similarity Measure	149
2.23.3	Dissimilarity Measure	150
2.23.4	Bhattacharyya Measure	151
2.24	Physical Laws	152
2.24.1	Physical Force Calculation	152
2.24.2	Work in Physics	153
2.24.3	Dispersive Prism	156
2.24.4	Modelling of Blood Pressure	157

2.24.5	Isoperimetric Problem	158
2.24.6	Heisenberg's Uncertainty Principle	159
2.24.7	Snell's Law of Refraction	159
2.24.8	Angular Momentum and Torque	160
2.24.9	X-ray Crystallography	161
2.25	Lemniscate	163
2.25.1	Summation and Multiplication Effect	163
2.25.2	Area and Arc-length of the Lemniscate	167
2.26	Abnormal Event Detection from Videos	170
2.26.1	Theory and Simulation Result	170
2.26.2	Entropy Estimation and Practical Results	174
2.27	Crime Investigation	176
2.27.1	Angle of Impact Calculation	177
2.27.2	An Exclusive Example	179
2.28	Historical Ruins	185
2.28.1	Number of World Heritage Sites	185
2.28.2	Ancient Sites from Algeria to Jordan	185
2.28.3	Ancient Sites from Iraq to India	186
2.28.4	Ancient Sites from Thailand to Vanuatu	188
2.28.5	Ancient sites from Rapa Nui to Brazil	188
2.29	Applications of Different Kinds	190
2.29.1	Sine Entropy of Uncertain Set	190
2.29.2	The Rules of 80/20 and 70	191
2.29.3	Network Communications using Sine Waves	192
2.29.4	Sine-Gordon Equation	192
2.29.5	Numerical Solution of Integro-Differential Equation	193
2.29.6	Curve Fitting	194
2.29.7	Geological Survey	195
2.29.8	Data Compression	195
2.29.9	Calculate Sine Function in Structured Query Language	197
2.29.10	Population based Optimization	198
2.30	Exercises of Chapter 2	199
<b>3</b>	<b>Sine and Cosine Functions in Computer Simulation</b>	<b>211</b>
3.1	Introduction	211
3.2	Simulation in Nuclear Physics	212
3.2.1	Importance of Simulation in Nuclear Physics	212
3.2.2	Modelling of Charged Particles	212
3.2.3	Calculation of Path Lengths	214
3.3	Earthquake Simulation	218

3.3.1	How does an earthquake breakout?	219
3.3.2	Importance of Earthquake Simulation	219
3.3.3	Mathematical Models for Earthquake Simulation	221
3.3.4	Boundary Element Method (BEM) for Fault Simulation	221
3.4	Ocean Wave Simulation	224
3.4.1	Importance of Water Wave Simulation	224
3.4.2	Methods of Water Wave Simulation	224
3.4.3	Simulation by Wave Superposition	225
3.5	Bushfires Simulation	227
3.5.1	Importance of Bushfires Simulation	227
3.5.2	Fire Growth Models	229
3.5.3	Fire Growth Simulation	230
3.6	Acoustic Simulation	233
3.6.1	Importance of Acoustic Simulation	233
3.6.2	Methods of Acoustics Simulation	234
3.6.3	BEM Formulation	235
3.6.4	Noise Simulation during Airplane Landing	236
3.7	Building Simulation	237
3.7.1	Importance of Energy Simulation	237
3.7.2	Building Performance Simulation	239
3.8	Bridge Simulation	244
3.8.1	Importance of Bridge Simulation	245
3.8.2	Bridge Simulation Methods	245
3.8.3	Masonry Arch Bridge Simulation	246
3.8.4	Collapse Simulation of Stone Arch Bridge	248
3.9	Circuit Simulation	249
3.9.1	Importance of Circuit Simulation	251
3.9.2	An Example of Circuit Simulation	251
3.10	Magnetic Field Simulation	252
3.10.1	Importance of Magnetic Field Simulation	253
3.10.2	Magnetic Field Modeling Approaches	253
3.10.3	Arrangement of Rotor Poles	254
3.10.4	Solution to Laplace's Equations	255
3.10.5	Magnetohydrodynamics	256
3.11	Railgun Simulation	258
3.11.1	Principle of a Railgun	259
3.11.2	Importance of Railgun Simulation	260
3.12	Fish Swimming Simulation	261
3.12.1	Importance of Fish Swimming Simulation	262

3.12.2	Fish Swimming Approaches	262
3.13	Fluid Simulation	264
3.13.1	Importance of Fluid Simulation	265
3.13.2	Approaches of Fluid Simulation	265
3.13.3	Smoke Simulation	266
3.13.4	Snow Simulation	266
3.13.5	Sand Simulation	267
3.14	Hurricanes Simulation	269
3.14.1	Importance of Hurricanes Simulation	270
3.14.2	Why Do Hurricanes Happen?	271
3.14.3	Hurricane Simulation Models	272
3.15	Flight Simulation	274
3.15.1	Flight Simulators	274
3.15.2	Importance of Flight Simulation	275
3.15.3	Methods of Flight Simulation	276
3.15.4	Visual Database Management	280
3.16	Exercises of Chapter 3	281
<b>4</b>	<b>Algorithms for Computing Sine and Cosine Functions</b>	<b>287</b>
4.1	Introduction	287
4.2	Infinite Product based Algorithms	288
4.2.1	Euler's Infinite Product of $\sin(x)$	288
4.2.2	Euler's Infinite Product of $\cos(x)$	289
4.3	Standard Polynomial Approximation Based Algorithms	293
4.3.1	Taylor Polynomials to Compute $\sin(x)$ and $\cos(x)$	294
4.3.2	Chebyshev Polynomials to Compute $\sin(x)$ and $\cos(x)$	297
4.3.3	Taylor-Chebyshev Polynomials to Approximate $\sin(x)$ and $\cos(x)$	298
4.3.4	Bessel Polynomials to Compute $\sin(x)$ and $\cos(x)$	304
4.3.5	Bessel-Chebyshev Polynomials to Approximate $\sin(x)$ and $\cos(x)$	307
4.4	Rational Polynomial Approximation Based Algorithms	310
4.4.1	Bhaskara I's Approximation	311
4.4.2	Padé Approximation with Rational Functions	313
4.4.3	Padé Approximation to Compute $\sin(x)$	315
4.4.4	Padé Approximation to Compute $\cos(x)$	317
4.4.5	Padé-Chebyshev Approximation to Compute $\sin(x)$	321
4.5	LUT Based Algorithms	328
4.5.1	IEEE 754 Floating Point Standard	328
4.5.2	LUT Algorithms of Tang [1]	330
4.5.3	Tang's [1] Algorithm for $\sin(x)$ on $[0, \frac{\pi}{4}]$	330
4.5.4	Algorithm of Gal et al. [2] to Compute Sine and Cosine	331

4.5.5	Pythagorean Triples to Compute Sine and Cosine . . . . .	332
4.5.6	Complex Exponential of Wong et al. [3] to Compute Sine and Cosine Together . . . . .	333
4.5.7	Computation of Sine and Cosine Pair $\text{sincos}(x)$ . . . . .	333
4.5.8	Double-precision Accuracy . . . . .	339
4.6	CORDIC Algorithm to Compute Sine and Cosine Functions . . . . .	339
4.6.1	Basic CORDIC iterations . . . . .	340
4.6.2	Simultaneous calculation of sine and cosine using CORDIC . . . . .	341
4.6.3	A numerical example of $\sin(\pi/3)$ and $\cos(\pi/3)$ calculation using CORDIC . . . . .	343
4.6.4	CORDIC as a built-in function in MATLAB . . . . .	345
4.7	Exercises of Chapter 4 . . . . .	347
<b>5</b>	<b>Essentials of Computer Architecture</b> . . . . .	<b>352</b>
5.1	Computer Architecture . . . . .	352
5.1.1	OFF-ON System . . . . .	352
5.1.2	Write and Read Mechanisms of Magnetic Disk . . . . .	355
5.1.3	Two's Complement Representation . . . . .	358
5.1.4	The IEEE 754 Floating Point Standard . . . . .	358
5.2	Single-Core Architecture . . . . .	362
5.2.1	Central Processing Unit (CPU) . . . . .	362
5.2.2	Main Memory . . . . .	363
5.2.3	Buses . . . . .	365
5.2.4	Adding Two Values Stored in RAM . . . . .	365
5.2.5	Instruction Set Computer . . . . .	366
5.2.6	Instruction Encoding and Decoding . . . . .	367
5.2.7	Clock Rate or Clock Speed or Clock Frequency . . . . .	370
5.2.8	Bus or Fetch-Decode-Execute or Machine Cycle . . . . .	371
5.2.9	File Structure . . . . .	373
5.2.10	An Illustrative Example . . . . .	373
5.2.11	Throughput . . . . .	378
5.2.12	Data Dependencies . . . . .	378
5.2.13	Pipelining . . . . .	380
5.2.14	Loop Level Parallelism . . . . .	381
5.3	Multi-core Architecture . . . . .	383
5.3.1	Multi-core CPU . . . . .	383
5.3.2	Parallelization in Multi-core . . . . .	386
5.3.3	Resource Sharing Among Processing Units . . . . .	387
5.4	Exercises of Chapter 5 . . . . .	390

---

<b>6</b>	<b>Hardware Optimization of Sine and Cosine Functions</b>	<b>404</b>
6.1	Introduction	404
6.2	Classification to CORDIC Hardware Implementation	405
6.3	Hardware Implementation of $\sin(x)$ and $\cos(x)$	408
6.3.1	Hardware Efforts in 1950-1970s	409
6.3.2	Hardware Efforts in 1980-1990s	410
6.3.3	Hardware Efforts in 2000s	412
6.3.4	Hardware Efforts in 2010s and later	414
6.4	Performance of Evaluation from Hardware Implementation	416
6.5	Exercises of Chapter 6	417
<b>7</b>	<b>Software Optimization of Sine and Cosine Functions</b>	<b>421</b>
7.1	Introduction	421
7.2	Automatic Optimization by Compiler's Options	422
7.2.1	Various Compiler's Optimizing Options	422
7.2.2	Speculative Execution	423
7.3	Manual Optimization Techniques	424
7.3.1	Vectorization	424
7.3.2	Loop Unrolling	426
7.3.3	Software Pipelining	426
7.3.4	An Illustrative Example for Manual Optimization	427
7.4	Selection of Loop Unrolling and Software Pipelining Factors	432
7.4.1	Importance of Optimization Factors Per Loop	432
7.4.2	I-Cache Effect for Factors Selection	433
7.4.3	Loop Unrolling Factors	433
7.4.4	Software Pipelining Factors	436
7.5	Elimination of Interlaced Gaps from Instructions	438
7.5.1	Dependence Graph of $\text{sincos}(x)$	438
7.5.2	Vectorization of $\text{sincos}(x)$	440
7.6	Optimization with Alpha Processors	441
7.6.1	Optimization Technique for the Alpha 21164	441
7.6.2	Automatic Code Generation	442
7.6.3	Optimized Theoretical and Practical Results	443
7.6.4	Optimization Technique for the EV-264 and EV-364	443
7.6.5	Optimized Theoretical and Practical Results	447
7.7	Optimization with AMD Opteron	448
7.7.1	AMD Opteron 244	448
7.7.2	Optimization Technique for the Opteron 244	449
7.7.3	Optimized Theoretical Results	451
7.8	Optimization of $\text{sincos}(x)$ for HPC Function	451

7.8.1	Optimization with IA-64	452
7.8.2	Optimized Theoretical Results	457
7.9	Optimized Results for HPC Functions	458
7.9.1	Measurement of Execution Times	458
7.9.2	Optimized Results Without Compiler Options	459
7.9.3	Optimized Results With Various Compiler Options	460
7.9.4	Average Optimization Factors	462
7.9.5	Superiority	470
7.10	HPC Functions Call and Accuracy	470
7.10.1	Call the Optimized HPC Functions from C/C++ and Fortran	471
7.10.2	Accuracy with Respect to Built-In Functions	472
7.10.3	Evaluation of Incremental Improvements	473
7.11	Exercises of Chapter 7	476
